

NightVision Guardian AI - Detection Report

Upload ID: 3

Risk Level: HIGH

AI Explanation:

****Brief Intelligent Explanation:****

The system detected multiple distinct objects during the night. Specifically, there are ****3 high-confidence detections of people**** (84.0%, 83.1%, 79.2%) and ****2 high-confidence detections of cars**** (88.89%, 83.83%). Additionally, there are several lower-confidence detections for both categories, which could indicate obscured objects, partial views, or environmental noise. The presence of multiple individuals and vehicles at night suggests significant activity in the monitored area, which is less common than during the day.

****Risk Level: MEDIUM****

****Justification:**** While there's no immediate indicator of an explicit threat (e.g., 'weapon' detected), the simultaneous presence of multiple people and vehicles, especially with high confidence, during night hours warrants attention. This level of activity is often a precursor to potential unauthorized entry, loitering, or other suspicious behavior. It requires further human review or investigation to ascertain the nature of the activity. It's not high risk because there's no direct evidence of malicious intent, but it's certainly not low given the time of day and the number of entities.

Detected Objects:

- car (88.89%)
- person (84.0%)
- car (83.83%)
- person (83.1%)
- person (79.2%)
- person (54.76%)
- person (46.3%)
- car (43.14%)
- car (42.85%)
