

NightVision Guardian AI - Detection Report

Upload ID: 5

Risk Level: HIGH

AI Explanation:

****Intelligent Explanation:****

The surveillance system has detected a significant number of potential intruders. There are ****5 high-confidence detections**** of 'person' (73.98% to 87.26%) and ****2 moderate-confidence detections**** (61.11% to 65.13%).

This strongly suggests the presence of multiple individuals. While the remaining 4 detections are very low confidence (25.5% to 35.69%) and could be false positives due to environmental factors (e.g., animals, reflections, shadows in night conditions), they do not negate the strong evidence provided by the higher-confidence alerts. The overall pattern points to a group rather than a single individual.

****Risk Level:** HIGH****

****Reasoning:**** The presence of at least 7 plausible individuals (5 high-confidence, 2 moderate-confidence) in a night surveillance scenario represents a substantial and immediate security concern.

Detected Objects:

- person (87.26%)
- person (78.63%)
- person (78.26%)
- person (75.67%)
- person (73.98%)
- person (65.13%)
- person (61.11%)
- person (35.69%)
- person (28.26%)
- person (25.77%)
- person (25.5%)
